

ReSIDS — graduation via FL/GL: a zero-day discovery becomes a diffused specialist

1 · Tier-2 fires — replicated on every node (local detection)

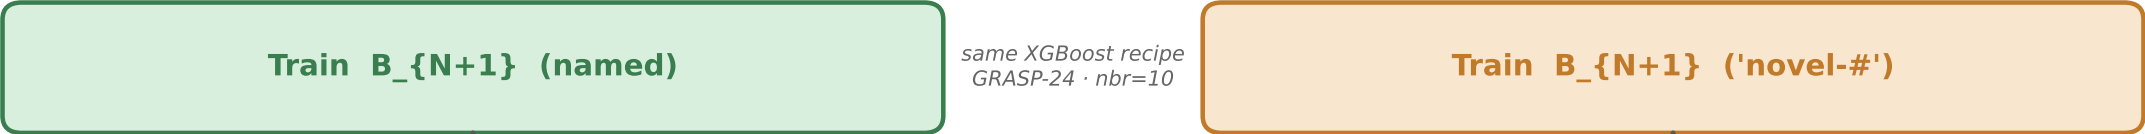

2 · Buffer + corroborate

3 · Label — two paths

4 · Train specialist B_{N+1}

5 · Admit to pool + diffuse via FL $\rightleftharpoons$ GL ★ reuses the booster diffusion

6 · Steady state

Once diffused, the attack is KNOWN → Tier-1 catches it (k-of-n); Tier-2 stops firing on it. N → N+1.

The detector (benign spec) stays replicated & local — only the DISCOVERY graduates and diffuses via FL/GL.
