

Explicit protocol-VALUE rules (learned from benign, ZERO attack examples, 0.52% FP):
value-violators caught (injection/high_StNum 100%, stale-timing replay 82%); order/rate/masquerade need stateful rules

green $\geq 50\%$ · orange $< 50\%$ (value rules miss order/rate attacks) · red = masquerade (stealth). Rules: $TTL \in \{11000\}$, $StNum \in [16, 4954]$, $SqNum \in [1, 4998]$, $timeFromLastChange \in [0, 1000]$, $cbStatus \in \{0, 1\}$.
